Light data from Glostertube test sheets (15mm lead glass at 50mA, or 20mm lead-free glass for triphosphor whites); results vary with diameter, current and gas. Ask for the same batch number to finish a job, and do not mix glass of similar colour names from different manufacturers. Data from the manufacturer, the Sign-Tec catalogue (Feb 2025) and our product records. Figures are typical and the manufacturer may change specifications. Stock varies: check sign-tec.co.uk or call us.
